

## Why businesses need to backup G Suite

The adoption & migration to public cloud services and SaaS apps is increasing at an exponential rate, along with data growth. While Cloud adoption comes with some great benefits, there is still a requirement to provide protection for your corporate data in these high availability platforms

### Reasons

- User accidentally deletes data
- User over-writes data with 'Save'
- Hacker or external party deletes/encrypts data
- SaaS Service ends or licencing error
- Malicious internal deletion of data
- Application error

Our G Suite cloud backup is compatible with all plans and included automated G Suite Email, Drive, Team Drive, Sites, Calendar, Contacts & Tasks recovery. New users are automatically added to the backup to ensure you always have coverage,

"You have a limited time from when the data was permanently deleted to restore... After that, the data is gone forever."

## Key Product Functionality

- Complete protection for your G Suite accounts
- Supported Features
  - Mail
  - Team Drive
  - Drive (excludes Google Photo's)
  - Classic Sites/Tasks/Chats
  - Calendar/Contacts
- Automated and on-demand backups
