StorageCraft® Recovery Solution™

at-a-glance

BACKUP   MANAGE   REPLICATE   RECOVER   PHYSICAL   VIRTUAL   CLOUD

StorageCraft® ShadowProtect® SPX

StorageCraft® ShadowProtect® SPX lets you rapidly and reliably back up, recover, and migrate your virtual and physical Windows and Linux systems with a single, cross-platform solution.

Key Features

- Back up your entire system including the OS, applications (such as SQL and Exchange), settings, and data.
- Recover files and folders in seconds or entire systems in minutes.
- Instantly boot backup images as VMs with StorageCraft VirtualBoot™ technology.
- Recover to dissimilar hardware or virtual environments with StorageCraft Hardware Independent Restore™.
- View and manage backup images directly from within the patented job timeline.
- Supports a broad range of hypervisor platforms, including VMware and Hyper-V

StorageCraft® ImageManager™

StorageCraft® ImageManager™ lets you take charge of your backups—onsite, offsite, and in the cloud—by helping you organize and manage your StorageCraft ShadowProtect SPX and ShadowProtect 5 backup image files.

Key Features

- Collapse and consolidate daily, weekly, and monthly backups.
- Use LAN or WAN-based replication.
- Replicate backup images securely to the StorageCraft Cloud.
- Use StorageCraft intelligentFTP® technology to transfer only the files you choose.
- Use StorageCraft HeadStart Restore® technology to pre-stage local backups into a VMWare or Microsoft Hyper-V virtual machine for standby failover.
- Automatically boot each backup image and email a screenshot of the machine's login screen.

StorageCraft® ShadowControl®

StorageCraft® ShadowControl® lets you monitor and manage SPX, ShadowProtect, and ImageManager, locally or remotely, all through a single, web-based management console.

Key Features

- Remotely monitor every server, desktop, or laptop running SPX or ShadowProtect.
- Get full visibility into the status and health of each backup job.
- Apply policy-based backup job configuration settings to multiple groups of SPX-protected endpoints.
- Customize automated alerts and notifications.
- Discover unprotected systems.
- Remotely push install the latest SPX or ShadowProtect software to unprotected Windows or Linux endpoints.
- Remotely activate and manage perpetual or MSP licenses.
- Lock SPX backup jobs; prevent end users from modifying, controlling, or deleting jobs.

StorageCraft ShadowProtect® IT EDITION

StorageCraft® ShadowProtect® IT Edition provides you with unlimited disaster recovery, data protection, and system migration for every Windows system in your IT environment without installing any software.

Key Features

- Recover Windows servers, desktops, and laptops to bare metal in minutes.
- Restore or migrate backup images to/from physical and virtual machines.
- Capture default factory images without having to install any software.
- Use StorageCraft Hardware Independent Restore technology to recover or migrate backup images to new systems (physical or virtual).

StorageCraft Cloud Services™

StorageCraft® Cloud Services offers anytime, anywhere access to data and systems in the cloud with options for immediate virtualization failover and networking support in the event of a site wide disaster.

Key Features

- Control offsite data and systems with real-time file access and system virtualization failover support.
- Access data and systems anytime, anywhere with the StorageCraft Partner Portal
- Powerful dashboard showing the status of all accounts, machines, seed drives, BMR drives, virtual machines, and account space used.
- Select Service Levels that best meet your needs, and utilize the pre-configured retention settings, or customize your own.
- 99.999% uptime.
- Monitored and managed 24/7/365 by the StorageCraft Network Operations Center,

---

StorageCraft Cloud Backup

StorageCraft® Cloud Backup provides key backup and recovery services to organizations using these top SaaS applications: Office 365 and G Suite.

Key Features

- Data is protected by state-of-the-art compression and encryption at rest and in transit.
- All backup and recovery controls are web-based, menu-driven, and intuitive.
- Needed files or folders can be identified and delivered immediately.
- Lower IT costs: no hardware overhead, no worries about updates.

StorageCraft File Backup and Recovery
WITH BACKUP ANALYZER

StorageCraft® File Backup and Recovery with Backup Analyzer intelligently identifies, protects, and recovers critical data on laptops and remote computers that are not regularly backed up to corporate servers.

Key Features

- Identify data that should and should not be backed up through the powerful Backup Analyzer.
- Set up backup policies on the fly for "unaddressed files" that the Backup Analyzer suggests as important.
- Install, configure, and monitor backups from one central location through an easy-to-use, web-based interface.
- Apply backup configurations to a single computer or to thousands with a single click.
- Change backup configurations without disruption to end users.
- Recover individual files and folders faster by eliminating the need to sort through unnecessary files.

StorageCraft GranularRecovery
FOR EXCHANGE

StorageCraft® Granular Recovery for Exchange allows you to easily search and recover Microsoft Exchange Server emails, mailboxes, and other mailbox items.

Key Features

- Recover mailboxes, email messages, and email attachments.
- Restore individual mailboxes quickly and easily.
- Search individual mailboxes or email messages for specific key words.
- Quickly mount backups for rapid access to Exchange database (.EDB) files.
- Use with any third party backup.
- Enjoy support for Microsoft Exchange Server 2016, 2013, 2010, 2007, and 2003.
