CYBER ESSENTIALS CERTIFICATION IN 24 HOURS

Cyber Essentials is a government-backed certification that ensures organisations are practicing good cyber hygiene. It's required for government tenders and is an indicator of a commitment to security and data protection.

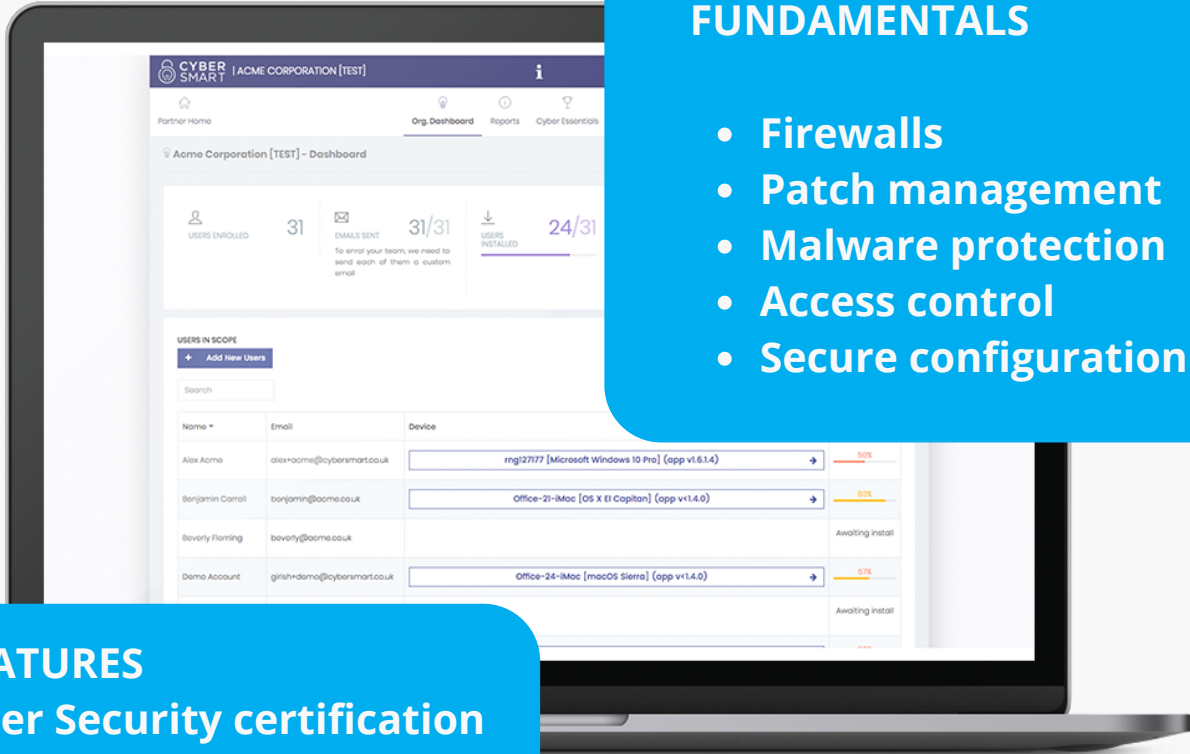

Getting Cyber Essentials certified protects your organisation against 99% of threats and demonstrates your security credentials to regulators and prospects

5 CYBER ESSENTIALS FUNDAMENTALS

- Firewalls
- Patch management
- Malware protection
- Access control
- Secure configuration

KEY FEATURES

- Cyber Security certification within 24 hours
- 100% Guarantee pass rate
- Smart platform checks to ensure a pass before submission
- Live support, guiding users through the questionnaire step-by-step

- Comprehensive device monitoring
- Live security information on all organisation devices
- Step-by-step instructions to fix security issues
- Organisation policies housed in-app
- Downloadable device, policy and software reports
- Ability to bulk install platform across multiple devices

INTRODUCING CYBERSMART

Everything you need to know about the CyberSmart platform

WHAT IS 'CONTINUOUS COMPLIANCE'?

Much like brushing your teeth or washing your hands, maintaining good 'cyber hygiene' is an ongoing process. Keeping your organisation safe requires routine checks and regular maintenance. This, in a nutshell, is continuous compliance.

However, continuous compliance doesn't have to mean monthly cybersecurity audits or hours lost checking company devices. There's a far simpler, more cost-effective way to monitor your cyber security 24/7.

HOW IT WORKS

CyberSmart's all-in-one platform helps any organisation reach the UK government standard for cybersecurity within 24 hours – easily and affordably. We can help you achieve Cyber Essentials, Cyber Essentials Plus, and GDPR Readiness, reducing cyber risks by as much as 99%.

But protecting your organisation doesn't end with getting certified. So we go further. Our platform monitors all of your organisation's devices, checking for updates, firewalls and security measures every 15 mins, keeping your business safe 365 days a year. Meanwhile, the platform's smart dashboard lets you check the status of individual devices and distribute security policies throughout the organisation.

ABOUT CYBERSMART

Over 50% of SMEs are hacked every year. Most of them have no cyber protection. The problem is that cyber security can be complicated, costly and easy to overlook. We started CyberSmart to fix this problem. Protecting your organisation from cyber threats shouldn't require expert knowledge or deep pockets. We're working to give every organisation, no matter their size, the tools to protect themselves easily and effectively.
